Inference: excluded (2 inferred claims left out)

One incident's timeline on the clock the pack interval chooses: the incident, the other records of it, events, interventions and diagnostics involving its machines, at its site or in its zone, and the statements of the documents that report it, each citing its evidence (Memory ADR 0013). An entry on another clock is placed only through a clock mapping Memory states, and names it; with none it is listed as not placed, never guessed. Records of one event that state different times are a conflict: every time is shown with its difference, none is chosen. Co-occurrence is listed apart and is never cause.

Every statement cites the claim ids it rests on. The claims index lists them; the appendices say how to resolve each evidence ref and record through the Ledger.

1. Records of this incident

Which other records Memory states are the same incident (same_as), and which it cannot decide (same_as_candidate: every reading, none chosen).

In scope:

event record:rec:sha256:c82df9cc3d8a3a5963d028fbc6906eca4450da73211dcb1cf2d55022f9664a14 - the pack subject

NOT COVERED - the snapshot holds no current claim of same_as, same_as_candidate about the nodes in scope within the interval.

2. Reconstruction on the chosen clock

Each placement on the pack clock in onset order: the event's stated kind, severity, description, machines, place and the record it rests on. A placement through a clock mapping names the mapping records. Records of one event are compared as one event.

In scope:

event record:rec:sha256:c82df9cc3d8a3a5963d028fbc6906eca4450da73211dcb1cf2d55022f9664a14 - via

```

6. Clocks and mappings

The clocks the involved machines record on, and every mapping Memory states from them (its parameters as stated, never applied here). A clock no mapping relates to the pack clock is why an entry is not placed.

In scope:

```

Left out: 2 inferred claims (inference excluded).
```

7. Co-occurrence (never cause)

Pairs of events from different sources whose onsets fall within the configured window on one clock. Co-occurrence is not causation.

In scope:

```
event record:rec:sha256:c82df9cc3d8a3a5963d028fbc6906eca4450da73211dcb1cf2d55022f9664a14 - via

```

NOT COVERED - the snapshot holds no current claim of co_occurs_within about the nodes in scope within the interval.

Claims index

Every claim the pack cites, as the snapshot holds it (the JSON pack holds each in full).
